The Notice says further. unless the District agrees to large it commercial rates for immercial service, that it is entied to a judgment against the Disict requiring the District to return the Association and/or its memers, any amounts paid in excess of e commercial rates, and further, at Claimant is entitled to a court rder mandating the District to rarge Claimant commercial rates specified in the District's contract ith Auto-Cart, Inc."

teaching at the slow speeds are just exactly what they would use at a higher speed. And that's what we're trying to do, is teach principles rather than speed," Messick said.

But he said the officers were timed on the course, "to give them a little stress and a little pressure to work under...We want to give them a little bit of the feeling of pressure of the chase, so to speak, or going to the scene of an accident at a higher rate of speed."

Along with eight hours of practical experience behind the wheel, the students received eight hours of classroom instruction during which the basics and their liability were explained, Messick said.

"We teach them about their responsibility in obeying the laws and making sure of what their vehicles are doing...where the officer stands if he makes a mistake when he's going to the scene of an accident or dispatched on an emergency call...This course is designed to teach the officer to do what he has to do, do his job, but do it safely...for the protection of the officers, the public, and everyone concerned.

Law enforcement officers from Wasatch County, Heber City, American Fork, Provo, and the U.S. Forest Service, participated in last week's classes.

## Fly-In This Weekend

me from the homebuilders, said ee Rowser, Hi Valley Aviation, le airport's fixed base operator. He ited as an example the Voyager, a ome-built aircraft that gained inernational attention when it flew round the world a few years ago. It as constructed of a graphite comosite which wasn't developed by n aircraft manufacturer, said lowser.

"The aircraft manufacturers are till building Model-T's," he said. They have not changed aircraft deigns or engines since the '40's.

"The home-built airplanes are by

far faster and more beautiful, with higher workmanship, than any factory-built airplane. These are not Wright Brothers airplanes. They've got airplanes that do 300 mph on 200 horsepower. To get that much horsepower out of a factory airplane, there's nothing in a singleengine that will do it. They have to go into the turbo-props to get as fast as these little home-builts.

"[The fly-in] is for the public, It's not just for these guys themselves. They want to show off their planes to the public."
